Priority number(s): FR19900001707 19900208

Abstract of FR2658024

Device for simulating a rotary luminous effect, characterised in that it comprises at least three light-emitting diodes (1), arranged circularly and mounted in a star configuration (2), and an electronic control circuit (3) supplied with power and connected to the output of each of these light-emitting diodes (1), the rotary luminous effect being obtained by successive activations of the light-emitting diodes under the control of the electronic circuit according to a defined sequence. Application: miniature vehicles.
